

For wet or dry filtration applications

Normally the most common execution for wet filtration applications are made from monofilament PP, PES or PA fine meshes in the range from 10 micron to 1000 micron mesh opening.

For dry filtration applications a wide range of needle felt options are available from the most simple to the high end exclusive ultra fine membrane and high temperature resistant materials.

The filter bag execution can be the simplest open end filterbag, with a sewn in standard steel ring or equipped with a moulded plastic or rubber collar designed to fit a specific equipment.

Filter bags can also be packed as spare parts and marked with product information on branded labels according to customers demands.
